

Type VA Vanax Fans Models VA, VAD, & VAB

Type VA — Direct Drive

Model VA

Sizes 6 through 10
207 to 1,811 CFM
Static Pressure to 1-1/2"

Construction

Model VA fans feature a spun aluminum casing and a sturdy cast aluminum vane section. The vane section also serves as the motor mount for the fan, and the cast aluminum rotor is mounted directly to the motor shaft. This direct drive arrangement provides years of maintenance-free service.

Model VAD

Sizes 12 through 48
955 to 36,396 CFM
Static Pressure to 2-1/2"

Construction

Model VAD fans feature a rolled steel casing with a formed steel vane section. Both the steel casing and vane section are coated with a protective epoxy paint finish. The vane section for the VAD also serves as the motor mount for the fan, and the cast aluminum rotor is mounted directly to the motor shaft. This direct drive arrangement provides years of maintenance-free service.

VAD fans come standard with heavy-gauge welded fan brackets for ease of handling and mounting the fan.

Type VAB — Belt Drive

Model VAB

Sizes 12 through 48
1,004 to 47,176 CFM
Static Pressure to 3"

Construction

Model VAB fans feature a rolled steel casing with a formed steel vane section. Both the steel casing and vane section are coated with a protective epoxy paint finish.

Motors for the VAB are mounted such that they are isolated from the airstream. Most models utilize variable pitch motor pulleys, which provide a wide adjustment of fan speed. This allows the performance of a VAB unit to be precisely matched to the system in which it operates.

VAB fans come standard with heavy-gauge welded fan brackets for ease of handling and mounting the fan.

Application

American Coolair *Vanax* fans are true vane axial fans designed for a wide range of commercial and industrial applications. High pressure efficiency permits the fans to be installed anywhere in the system — in any position. The fans can be used for either supply or exhaust by simply turning the entire unit to move air in the desired direction.

Vanax fans are extremely compact and well suited to locations where space is limited, and can often be easily mounted directly to the ductwork. As a result of very close tolerances and carefully matched vanes and rotors, *Vanax* fans offer exceptional performance across their size ranges.

Motors

Totally enclosed motors are standard. Several alternatives, such as explosion proof or two-speed motors, are available to fit your specific needs. Only nationally recognized brand motors with nationwide service facilities are used.

Motor availability is limited on certain fan models.

Contact your American Coolair representative for more information. Totally enclosed, single phase motors have built-in overload protection.

Finish

Parts requiring painting are processed through the advanced American Coolair multi-stage pretreatment system prior to the application of any coatings to ensure maximum finish adhesion. These parts are then powder coated with epoxy to provide a protective coating rated excellent for hardness, impact resistance, adhesion and chemical resistance.

Listings

Type VA, VAD, and VAB ventilators are listed by Underwriters Laboratory, Inc. to U.S. and Canadian safety standards.

Certified ratings licensed by AMCA (Air Movement and Control Association International, Inc.), for both air and sound performance, are available for all *Vanax* fans.

Performance Ratings

American Coolair Corporation certifies that the Type VA, VAD, and VAB fan models shown herein are licensed to bear the AMCA seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

Typical Specifications

Vane axial fans shall be American Coolair Type VA, VAD, or VAB as manufactured by American Coolair Corporation, Jacksonville, Florida; specific models shall be as shown in the fan schedule. Fan housing shall be made of aluminum with cast aluminum vane section (VA) or epoxy paint coated steel with formed steel vane section (VAD & VAB). Fan rotor shall be cast aluminum. All motors shall be totally-enclosed. Fans shall be licensed to bear the AMCA Certified Ratings Seal for Sound and Air Performance. (Specify for each fan model in schedule the required CFM and static pressure; motor enclosure, phase and voltage. List accessories — as described on Pages 6 & 7 — as required.)

- 1 — Performance certified is for Installation Type B: free inlet, ducted outlet. Performance includes the effects of an inlet bell.
- 2 — The first two or three letters of the model number identify **fan type**. The next two numbers indicate **fan size**, the next letter identifies motor **horsepower**. For direct drive fans, the last two numbers indicate fan speed. Example: Model VAD14M35 is Type "VAD" (direct drive) 14" size, 1-1/2 H.P., 3525 RPM.
- 3 — The sound ratings shown are loudness values in hemispherical sones at 1.5m (5 ft.) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for Installation Type B: free inlet hemispherical sone levels. The sound ratings shown are at 0" static pressure.
- 4 — Maximum brake horsepower (BHP) within the catalog performance range. Power rating (BHP) does not include transmission losses. BHP at most static pressures listed is less than that shown, in some cases substantially less. For specific BHP values at individual static pressure points, contact your American Coolair representative.
- 5 — To convert air performance (CFM and SP) and power (BHP) to metric units, multiply CFM x .000472 to obtain cubic meters per second (m³/s). Multiply SP x 248.36 to obtain pascals (Pa). Multiply BHP x .7457 to obtain kilowatts (kW).
- 6 — These models use a 3450 RPM motor with a maximum 145T frame size.
- 7 — These models use fixed pitch pulleys.

ALL SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE

Options and Accessories

Inlet Bell

For a Vanax fan that is not duct connected at the inlet, an inlet bell is recommended for efficient performance.

Inlet/Outlet Guard

Guards prevent the entry of foreign material into the fan. Punched sheet metal guards with OSHA compliant openings are used on Vanax fans up through Size 18. For sizes 24 and up, the guard consists of 1" x 1" wire mesh. Guards can be mounted on either the fan inlet or outlet.

Belt Tube (VAB 24-48 Only)

The painted steel belt tube isolates the drive components from the airstream. A belt tube is standard on VAB sizes 12-18, and is an option for sizes 24-48. Due to positive pressures on the motor shaft side of the VAB fan, either a belt tube or drive guard accessory (see below) is recommended to minimize air leakage.

Motor Cover (VAB Only)

The painted steel housing encloses motor and drives on belt drive models. The cover is open on the motor pulley end to allow for ventilation of motor.

Drive Guard (VAB Only)

This guard keeps personnel and foreign objects away from the rotating motor sheave and belts. For Size 24-48 units without a belt tube, a drive guard is recommended to minimize air leakage.

Companion Flange (VAB and VAD only)

The companion flange — a flange identical to the fan flange — is designed to be attached to the adjoining duct to simplify fan installation.

Duct Connector

A duct connector is available for ease in mating the Vanax fan to ductwork. The duct connector is tapered for sizes 10 and below, and is straight for sizes 12 and above.

Access Panel (VAB and VAD only)

This removable panel allows limited access to fan for inspection and cleaning of fan interior, and lubrication of direct drive motors.

Protective Coatings

Ventilator units are not recommended for exhausting air of a corrosive nature. However, special protective coatings are available where units may be exposed to corrosive exterior conditions. Parts requiring painting are processed through the American Coolair multi-stage pretreatment system prior to the application of any coatings to insure maximum finish adhesion. These parts use a thermosetting epoxy powder paint with an average thickness of 3 mils and baked at 400°F to a smooth, hard continuous finish.

For applications that require more specialized surface protection, American Coolair offers alternatives: 6 mil epoxy or hot dip galvanizing, and others. For more information about special protective coatings, contact your American Coolair representative.

Pre-Wired Motor

For convenience in connecting direct drive units to the power supply, the motor may be pre-wired to a conduit box mounted on the exterior of the fan housing.

Safety Disconnect Switch

This switch is designed to mount near the fan and serve as a safety disconnect from the power supply.

Mounting Feet

When necessary to support fan weight from floor or ceiling, mounting feet should be specified. Applications which involve wall mounting should be referred to your American Coolair representative for recommended fan mounts. Type of support to which fan will be mounted and location relative to motor (or access panel) should be clearly stated.

PRV Kit (VAB and VAD only)

The VAB or VAD fan can be ordered with a PRV kit, which permanently converts the unit to an Upblast Power Roof Ventilator. The kit includes a curb cap for roof mounting, and an exhaust shroud suitable for all-weather operation.

Special Motors

Two-speed, energy efficient and explosion-proof motors for hazardous locations may be available for many models. Motor enclosure may affect UL listing.

Installation, Selection, and Maintenance

INSTALLATION: American Coolair's Vanax fans may be mounted in any position. For convenience in wiring and service, the motor should be readily accessible. On direct drive units, access through adjacent duct work is recommended. On belt drive units, the motor position must be considered with regard to service and adjacent objects such as wall or ceiling.

The duct fan has flanged ends on the steel housing for convenient mounting directly to the duct system. Flexible connections or transition pieces may be utilized to reduce noise transmission, simplify duct attachment, and provide access to the fan interior.

If the fan cannot be adequately supported by duct work or otherwise, optional mounting feet should be utilized. Type of support (floor or ceiling) and location relative to motor or access panel will determine proper type and location of mounts needed.

Always check blade clearance and direction of rotation before operating.

SOUND: Sound ratings may also be a factor in fan selection. Sound ratings provided in the performance tables on Pages 4 & 5 are shown in Sones. Individual octave band sound data can be provided upon request; contact your American Coolair representative.

MAINTENANCE: Vanax fans should be cleaned as necessary to remove accumulated dust, dirt and other foreign matter which may collect on the blades or interior surfaces. If belt drive, belt(s) should be inspected and tension adjusted. Check belt(s) for proper alignment.

External relubrication fan bearing fittings are standard with belt drive models. Pillow-block ball bearings should be lubricated annually or more frequently, depending upon conditions and operating cycle. Refer to the maintenance instructions supplied with the fan. For lubrication of the electric motor, consult the instructions provided by the motor manufacturer.

Limited Warranty

In the sale of its products, American Coolair Corporation agrees to correct, by repairs or replacement, any defects in workmanship or material that may develop under proper and normal use during the period of one year from date of shipment from factory. Any product or part proving, upon American Coolair's examination, to be defective during limited warranty period will be repaired or replaced, at American Coolair's option, f.o.b. factory, without charge.

Deterioration or wear caused by chemicals, abrasive action or excessive heat shall not constitute defects.

Motors are guaranteed only to the extent of manufacturer's warranty.

American Coolair's limited warranty does not apply to any of its products or parts that have been subject to accidental damage, misuse by the user, unauthorized alterations, improper installation or electrical wiring, or lack of proper lubrication or other service requirements established by American Coolair.

Repairs or replacements provided under the above terms shall constitute fulfillment of all American Coolair's obligations with respect to limited warranty.

THE LIMITED WARRANTY STATED HEREIN IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS, STATUTORY OR IMPLIED, INCLUDING WITHOUT LIMITATION THAT OF MERCHANTABILITY AND FITNESS.

NO LIABILITY FOR REINSTALLATION COST OR FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY NATURE IS ASSUMED OR SHALL BE IMPOSED UPON AMERICAN COOLAIR.

WARNING CAUTION

DO NOT INSTALL FAN WITH MOVING PARTS WITHIN 8 FEET OF FLOOR OR GRADE LEVEL WITHOUT A GUARD THAT COMPLIES WITH OSHA REGULATIONS. **DO NOT** USE UNLESS ELECTRICAL WIRING COMPLIES WITH ALL APPLICABLE CODES. **DO NOT** WIRE WITHOUT PROVIDING FOR A POWER SOURCE DISCONNECT AT THE FAN ITSELF. **DO NOT** SERVICE EXCEPT BY A QUALIFIED MAINTENANCE TECHNICIAN AND ONLY AFTER DISCONNECTING THE POWER SOURCE. FAILURE TO OBSERVE THESE PRECAUTIONS CAN RESULT IN SERIOUS INJURY OR DEATH.
